

## The Associate Actuary

**An associate actuary is an individual involved in finance management who deals with the pricing of products to maximize profit. Financial actuaries use statistics and reason to logically estimate financial outcomes based on probability. Some standard requirements and skills included in An associate actuary job typically requires at least a bachelor's degree and experience developing and pricing products; preparing financial reports and projections; developing marketing agreements with institutional clients; preparing annual statements and assisting with long-term business planning; and conducting experience studies comparing a client's mortality, morbidity, expense, and investment experience with industry statistics.**

Associate actuaries are absolutely essential in the construction and pricing of the products sold by individual companies. They work very closely with sales and marketing executives, underwriting executives, and investment and accounting

services. Actuaries must use mathematical knowledge and logic to define and analyze individual problems.

Associate actuaries are also the analytical backbone of successful businesses' financial security and profit maximizing programs. Financial actuaries are the brains behind setting the prices on all of a given company's products. This is an essential contribution that allows average Americans to happily live their daily lives without having to worry too much about their financial futures.

Indeed, the services provided by financial actuaries act as safeguards against life's economic catastrophes. Actuaries provide detailed investment insights that help ensure that our financial and other non-liquid assets, such as homes and vehicles, are safe and free from economic woes. The work of actuaries is of indirect benefit to us all. Actuaries work in multiple sectors of the economy but are more heavily represented in the financial services sector. Companies in this sector range from insurance companies to investment firms such as commercial banks, investment banks, and retirement funds.

Successful associate actuaries need to possess the ability to manage assets and liability, and to apply their knowledge

of consumers to product pricing and valuation. Skilled associate actuaries possess strong analytical skills, business knowledge, and a keen understanding of human behavior. More specifically, associate actuaries have to be able to look at the big picture — including elements of financial analysis, asset selection, stock selection, plan implementation, and the ongoing monitoring of investments and possible price pros and cons.

Associate actuaries are sought out by respectable and experienced businesses to maximize their profits. These businesses are looking for long-term returns on their investments. This is a very important factor in hiring an associate actuary. An associate actuary, at least in most associate actuary positions, will be responsible for scrutinizing and evaluating product pricing, performance, and profitability. The whole point of business and investments is to gain positive returns, and if an associate actuary is fundamentally sound at aiding in this crucial objective, then that actuary will have numerous actuarial job openings waiting.

The demand for successful associate actuaries is always very high. This means that associate actuary job openings are definitely out there.
