In USA or in Canada you can use the Internet to locate available positions as a business analyst, computer technician, systems administrator, or sales executive with many of the largest telecommunications companies. Other countries that are rapidly expanding and providing job hunters with openings in the telecommunications field include India, South Africa, England, and Dubai.

It is more than likely that you will be able to find a telecommunication opening for which you are qualified no matter where you are living presently. Because it is hard for these companies to keep pace with technology, the need for workers is climbing each day. Almost all of the larger players in the telecom industry provide ongoing training classes for new employees that are offered round the year.

You can apply to become a telecom operator as long as you have at least a high-school diploma. There are also open sales positions that are often available to people who are willing to complete some of the job training courses. Many younger workers will find telemarketing to be a great way to gain job experience and they can even apply for part time positions that can be worked around their college schedules. Older workers, who may be retired, can also find this a very good opportunity.

If you are interested in applying for a position in telecommunications, you will need to understand the duties that are directly related to the job. Having a college degree may not be essential, but it will certainly help you if you are applying for the higher paying positions. It is very important to have some basic knowledge of computers and you should

Telecom Career Feature

be able to deal with the public in a calm, professional manner at all times. A good speaking voice, good hearing, and a relaxed and friendly communication manner will help you secure a position in customer assistance.

There are a number of telecom positions that will require workers to have a certain amount of specialized expertise. For example, most technicians will need a strong foundation

that could require experience in SSIR/IR installations (which includes the DSL network) or designing voice networks. It will also be helpful for applicants to be able to demonstrate a track record for resolving problems that involve system software, or equipment. LAN environments and other complex systems require specialized training for most entry-level workers who are applying for these open positions.
